Rulesets / New branch ruleset

Protect your most important branches

Rulesets define whether collaborators can delete or force push and set requirements for any pushes, such as passing status checks or a linear commit history.

Ruleset Name *

Branch protection rule

Enforcement status

Disabled

Bypass list

Exempt roles, teams, agents, apps, and users from this ruleset by adding them to the bypass list.

Actors

All

Roles

Teams

Apps

Users

Others

+ Add bypass

Bypass list is empty

Target branches

Which branches should be matched?

Branch targeting criteria

Add target

Branch targeting has not been configured

Rules

Which rules should be applied?

Branch rules

☐ Restrict creations
Only allow users with bypass permission to create matching refs.

☐ Restrict updates
Only allow users with bypass permission to update matching refs.

Restrict deletions
Only allow users with bypass permissions to delete matching refs.

☐ Require linear history
Prevent merge commits from being pushed to matching refs.

☐ Require deployments to succeed
Choose which environments must be successfully deployed to before refs can be pushed into a ref that matches this rule.

☐ Require signed commits
Commits pushed to matching refs must have verified signatures.

☐ Require a pull request before merging
Require all commits be made to a non-target branch and submitted via a pull request before they can be merged.

☐ **Require status checks to pass**
Choose which status checks must pass before the ref is updated. When enabled, commits must first be pushed to another ref where the checks pass.

Block force pushes
Prevent users with push access from force pushing to refs.

☐ **Require code scanning results**
Choose which tools must provide code scanning results before the reference is updated. When configured, code scanning must be enabled and have results for both the commit and the reference being updated.

☐ **Require code quality results**
Choose which severity levels of code quality results should block pull request merges. When configured, a code quality analysis must be done on the pull request before the changes can be merged.

☐ **Restrict code coverage**
Enforce minimum line coverage thresholds on pull requests. When configured, uploaded coverage data must meet the specified criteria before changes can be merged.

☐ **Automatically request Copilot code review**
Request Copilot code review for new pull requests automatically if the author has access to Copilot code review and their premium requests quota has not reached the limit.
